

# VIPEEL PRECISION

## A POWERFUL BOOSTER FOR TREATING STUBBORN HYPER PIGMENTATION

The Precision Peel is made from the same synergistic blend of ingredients as the VI Peel, but at a higher concentration, for a peel that is about 25% stronger than a VI Peel. Precision is an excellent addition for treating stubborn hyper pigmentation including melasma, actinic keratosis and age spots on hands, arms or chest. The Precision Peel is to be used in conjunction with the VI Peel.

### **DIRECTIONS FOR APPLICATION:**

Cleaning the skin with pure acetone solution is essential, as it is the best way to remove all oils and part of the outer stratum. Extra rubbing, without being too aggressive, will enhance the results. Pull the tip out from the Precision vial and release into the cup by pressing the sides. Add VI Peel solution and mix together and then apply as you would the regular VI Peel. This combination will provide a deeper peel and overall enhanced results.

Apply the Post Peel Moisturizer 2-4 times per day for 2-3 weeks starting on Day 1 and throughout the peeling process. This will soothe any irritation and prevent hyper pigmentation.

PLEASE NOTE: The Precision Peel must be used with the VI Peel, not on its own. This type of application creates a risk of an uneven tone. The Precision Peel can be applied on any small areas of the body. Results will vary according to part of the body treated and the practitioner's level of expertise in peeling other than the Face, Neck, Chest or Hands.
